

**We meet our customer's needs for capturing welding smoke!**  
**Nederman increases its product range.**

## Welding and Grinding Table

The new product called, "Welding and Grinding Table" soon to be released, is an industrial working table with extraction functions for welding and grinding for metal fabrication.

This robust working table takes care of the pollutants before they reach the breathing zone. The air is extracted either in the back of the table or downwards through the grid in the table surface.

Fumes and light particles will be extracted mainly by the airflow in the back and heavier particles will fall down to the dust drawer, in the bottom of the table.

### Easy to install and very flexible

The table can be connected to an external fan either in a system with other tables, with extraction arms and filters, or even as a single unit.

### Designed for indoor installations and available in 3 sizes / widths

Welding and Grinding Table 900 Part Number 10500133  
Welding and Grinding Table 1350 Part Number 10500233  
Welding and Grinding Table 2000 Part Number 10500333

### The external fan enables flexible extraction capacity

Recommended airflows are from 1000 m<sup>3</sup>/h up to 4000 m<sup>3</sup>/h, depending on table size. *Calculate the air flow needed for your application.*

### Can also be connected to the range of Nederman filters

This product offers the flexibility of connecting from smaller the FilterBox up to the various dimensions of the modular FilterMax. *Use NedQuote for dimensioning of the system.*

### The new working tables are user friendly

The hinged side panels can be opened when working on long objects. The table has an ear that can be used for the ground clamp of the welding unit, or as a ground connection when working with dust that might be explosive.

### The new working tables are maintenance friendly

The dust drawer can easily be emptied from the front of the table. The working area of the table can be replaced when worn out.

### ORDERING INFORMATION

The welding and grinding table is ready to order as from 29<sup>th</sup> April, 2008 with a lead time of 15 working days.
